

Sugar Land, TX

Community Survey

January - March 2025

Powered by  Zencity

Survey Methodology

The current cycle of the web-based Community Survey collected survey data between January - March 2025. Respondents were digitally recruited (e.g., over social media, mobile apps, websites, and survey panels). These ads are targeted to residents, and responses are only included in the data when a local valid zipcode is provided.

Respondents who self-reported being under 18, who declined to provide any demographic information, or those who provided an invalid zipcode are excluded from the results.

465 valid respondents participated in the web-based Community Survey during this cycle.

Representation

Zencity ensures broad demographic representation in several ways:

Before data collection, Zencity employs national statistical data to establish response targets. These targets are defined based on race/ethnicity, age, and gender.

During data collection, we track the demographic composition of the survey responses in real time, comparing them to the predetermined targets. We fine-tune our distribution and advertising strategies as needed to target all demographic groups.

After data collection, Zencity employs an industry-standard statistical technique called rake weighting. This assigns a unique weight to each respondent based on their demographic characteristics. This method ensures that the distribution of these characteristics in the final weighted sample aligns with the community's overall demographics.

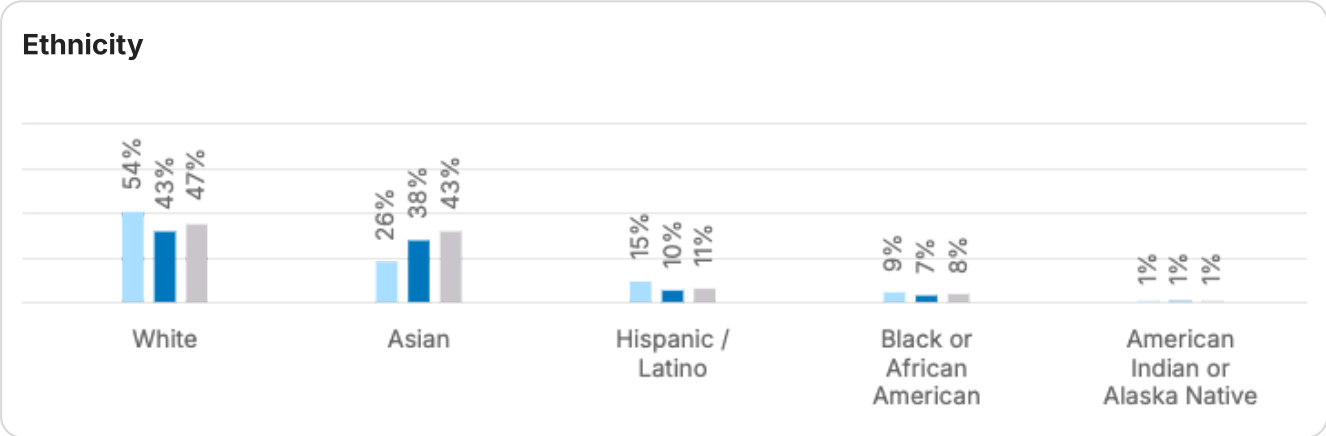

Sample Composition

465 valid respondents

Key

- **Unweighted demographics** - What we collected, without adjustments
- **Weighted demographics** - Our sample, adjusted to be representative of the population
- **Population demographics** - The demographics of the 18+ population

* The "Other" category includes missing data, people who selected "prefer not to say", and other groups not defined in the census.

Overall Quality of Life

Residents' quality of life is a key metric for local government leaders. Here, we present how Sugar Land residents are feeling about their quality of life, looking at how this changes by demographic group and geography.

We will show the percent of valid respondents who reported either a 4 or a 5 on the 1-5 scale, weighted by age, gender, and race/ethnicity (see page 3 for details).

Scores will be shown only for groups (e.g., for a geographic area or for a demographic group) with at least 30 responses. For groups between 30 and 49 respondents, we highlight the small sample size using an (!). Use these scores with caution.

How is the overall quality of life in Sugar Land?

Focus Areas

The next pages highlight community characteristics of interest and provide insights into these characteristics, along with breakdowns by relevant groups for further analysis.

These insights are designed to support targeted strategic planning and deeper analysis. Where applicable, follow-up questions were included, focusing on responses that highlighted challenges (e.g., low ratings).

Follow-up questions in Zencity surveys gather detailed feedback, clarify responses, or provide context triggered by prior answers to help address issues or improve services.

Community Benchmark

We aim to help Zencity clients understand their results and put them into context. To that end, we will compare Sugar Land's results to the United States as a whole and against communities with similar characteristics such as size, population density, and region (their "cohort").

These cohorts help to distinguish patterns unique to each client from those that are common in similar communities.

How we compare Sugar Land to other similar communities

Creating the cohorts

First, all cities, towns, and counties in the US--not just Zencity clients--are put into cohorts based on geography and demographics using a method known as cluster analysis. This method balances a range of different characteristics to put communities into cohorts that are statistically similar to one another. The result of this step is one set of cohorts for cities and towns and a second set for counties.

We chose this method to create objectively similar groups of communities with respect to characteristics that are likely to be correlated with answers to the survey questions. By creating cohorts of larger sets of communities we have found that our benchmark baselines tend to be more reliable than they would be if we had direct comparisons of a small number of communities. See our Help Site for more information on cohorts, including the full list of communities in your cohort.

Creating cohort scores and national benchmark scores

The Zencity National Benchmark Survey is conducted semiannually, collecting about 5000 responses across the country. The cohort scores are the weighted average of scores for respondents in each cohort. These weights are calculated to match the client's own demographics, to make them directly comparable to the clients' scores. National scores are calculated in a similar manner.

Your Cohort

Sugar Land is in the South and Central Small / Medium Cities cohort. The table below shows some demographics of your community and general makeup of communities in your cohort. Note that all percentages are the percent of the 18 and over population.

See our [Help Site](#) for the full list of communities included in your cohort. Because we are creating a cohort from the National Benchmark Survey data instead of running representative surveys of selected communities, most cohort scores are generated from a few responses from each community.

	18+ Pop.	% age 18-34	% age 55+	% White	% Black	% Hispanic	Median income
Sugar Land, TX	85,154	23%	43%	47%	8%	11%	\$132,247
	Median 18+ Pop.	Avg. % 18-34	Avg. % age 55+	Avg. % White	Avg. % Black	Avg. % Hispanic	Avg. Median Income
South and Central Small/ Medium Cities	111,877	34%	34%	59%	21%	21%	\$73,482

The overall quality of life in Sugar Land is **20% higher** than its cohort and **higher** than the national score.

Free-Text Responses

Respondents were asked open-ended questions about what the Sugar Land government does well and how Sugar Land could improve its services.

This section presents the main themes from both questions. Using our proprietary AI algorithm, responses are analyzed and categorized into

unique topics and subtopics for Sugar Land, with multiple labels assigned to responses when relevant.

To ensure comprehensive information, responses that have been flagged as invalid (e.g., under 18, missing demographic data, or invalid zip codes

but claiming residency in Sugar Land), are analyzed in the free-text responses but excluded from the quantitative results.
